

Over **one billion people in the world have no access to electricity.**

The UN set the target of electricity for all at 2030, but the forecast is that still one billion will be excluded.

Almost three billion people have no clean fuel for cooking and their number will not diminish by 2030.

Today four million people die each year for indoor pollution due to bad combustion.

WAME (World Access to Modern Energy) & Expo2015 informs on the issue and its solutions
